The following comments are in reference to USDA, Agricultural Marketing Service Docket Number TM-04-07 concerning 7 CFR Part 205, National Organic Program Sunset Review process.

BSYD Corporation thanks the United States Department of Agriculture and the National Organic Standards Board for the opportunity to comment on the Sunset Review of the 2002 National List. **We support the list as published, and would like to especially support the following material:**

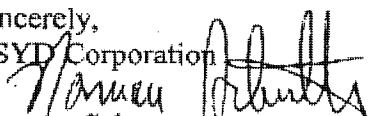

Calcium Hydroxide as it is critical for the conversion of organic cane juice into organic granulated cane sugar. There are no other options for this and no known materials that will perform this function. Furthermore the ability to sweeten many organic food products relies on the use of organic sugar in the formulation and to make the products palatable to the consumer.

Native Corn Starch is another processing aid used in organic sugar for the production of organic powdered sugar. The corn starch is typically added at a 3% ratio and performs the function of an anti-caking agent. Organic corn starch is in very limited supply in the US and EU markets and not available in Central and South America where most of the organic sugar is produced.

Additionally, we support the efforts of the OTA in its efforts to resolve the issues raised under the rulings issued in Harvey v. Venneman.

Sincerely,

BSYD Corporation

Norman Schmutter

President
